Senior Full-Stack and Applied AI Engineer with 9 years of experience building scalable web and mobile applications across fintech, blockchain, and AI-driven products. Strong expertise in Python, Node.js, React, and React Native, with hands-on experience developing Generative AI solutions, including Retrieval-Augmented Generation (RAG) applications, LLM integrations, and AI-powered workflows. Proven ability to design, build, and deliver secure, high-performance systems from concept to production.

Work Experience

Module Lead, May 2019 - Present

CakeSoft Technologies Private Limited | Pune

- Built scalable cross-platform applications for fintech, crypto, banking, social, chat, and e-commerce products across web and mobile platforms.
- Architected and developed AI solutions, Retrieval-Augmented Generation (RAG) chatbots, and AI-powered workflows, leveraging LangChain, LlamaIndex, LangGraph, and Large Language Models.
- Integrated OpenAI, Anthropic, Groq, and Hugging Face models into production applications.
- Designed and implemented AI backend services and APIs using Python and FastAPI, integrating semantic search, embeddings, prompt engineering, and vector databases such as Pinecone, MongoDB, and pgvector.
- Worked extensively with Bitcoin technologies and protocols, including Bitcoin wallet infrastructure, Lightning Network, RGB protocol, and Whirlpool, implementing crypto-enabled features in production applications.
- Built and deployed a Model Context Protocol (MCP) server enabling context-aware integration between AI models, external tools, and enterprise data sources.
- Developed custom native module integrations for Android and iOS using React Native bridges, TurboModules, and Rust FFI to deliver high-performance cross-platform functionality.
- Followed spec-driven development practices using OpenSpec and collaborated with AI-assisted development tools, GitHub Copilot, and Claude.
- Developed responsive and high-performance web applications using React, Svelte, TypeScript, and modern frontend architectures
- Built and maintained scalable RESTful backend APIs and microservices using Node.js, integrating third-party services, authentication systems: JWT and OAuth-based workflows, and payment gateways.
- Implemented real-time features, including chat, notifications, and live data synchronization, using WebSockets and event-driven architectures.
- Developed backend services in Rust using Tokio and asynchronous programming patterns to build high-performance applications and infrastructure services, like Watchtower and Orbis1
- Practiced test-driven development (TDD) and implemented automated testing strategies using Jest, Maestro, Detox, and Appium to improve product quality and release confidence.
- Implemented scalable state management using Redux, Redux Thunk, Redux Saga, and Zustand
- Designed offline-first architectures using Realm, WatermelonDB, SQLite, and caching strategies
- Built CI/CD pipelines using GitHub Actions to automate builds, deployments, and release management.
- Led development teams through technical planning, task allocation, code reviews, and delivery coordination

- Represented the organization and its products at international conferences, delivering technical demonstrations and engaging with developers, partners, and the broader community.
- Built workflow automations for app builds, deployments, package publishing, and release management
- Awarded a 2 BTC bounty by the Human Rights Foundation (HRF) for contributions to the implementation of Border Wallets.

Software Developer, May 2017 - May 2019

Podium Systems Private Limited | Pune

- Developed full-stack web and mobile applications using Spring Boot, React Native, Android, and iOS.
- Converted UI/UX designs and wireframes into high-performance, responsive, and production-ready applications
- Designed and integrated backend microservices, payment gateways, authentication systems, and third-party APIs
- Implemented Firebase services, in-app purchases, push notifications, analytics, and cloud-based features
- Integrated geolocation, mapping, advertising, and social platform APIs to enhance application functionality.

Projects

Ask Keeper Concierge Bot

RAG-powered AI concierge assistant using LLMs, semantic search, and automated workflow, enabling users to ask product-related questions, report bugs, and suggest features through natural conversations. Designed workflows to automatically transform chat interactions into structured issue tickets and feature requests, streamlining user feedback collection and product development.

Orbis1 Accounts and Auth App

A modern financial platform built for businesses and merchants to manage and transact in USDT globally. It simplifies receiving and transferring stablecoins, eliminating the complexity of traditional payment systems.

Tribe RGB

Tribe RGB is a platform dedicated to tokenized digital assets on the Bitcoin RGB protocol. It offers a cutting-edge decentralized finance experience with a Bitcoin wallet and peer-to-peer community messaging.

Bitcoin Keeper

Bitcoin Keeper is a non-custodial Bitcoin multisig wallet designed to help individuals securely self-custody Bitcoin without lock-ins. Advanced options include time-locks, hardware wallet support, and Tor for privacy.

GreenPages

Super app platform in partnership with DOKU, one of Indonesia's leading payment technology companies. Included Messenger, Zocial (an Instagram clone), and e-commerce features.

Core Skills and Tools

TypeScript, Node.js, React, React Native, Python, FastAPI, Rust, Generative AI, LLMs, RAG, LangChain, LlamaIndex, LangGraph, AI Agents, Blockchain, MongoDB, PostgreSQL, AWS, Google Cloud Platform (GCP), Docker, Android, iOS.

Education

Bachelor of Engineering (B.E.) in Electronics and Telecommunication Engineering, Elective: Artificial Intelligence
Pune University, Jan 2013 - Jan 2017

Languages

English, Hindi, Marathi
